

Company presentation

CIRTEM

Presentation

Power electronics

System engineering

an optimized management of electric energy flow

39 employees, incl 23 R&D

Objective: Create power converters and global solutions for

- Premises 2 400 m²
- Small & Medium volumes
- Location Toulouse area
- ISO 9001 (2020)
- **Innovative applications**
- **Demanding markets**

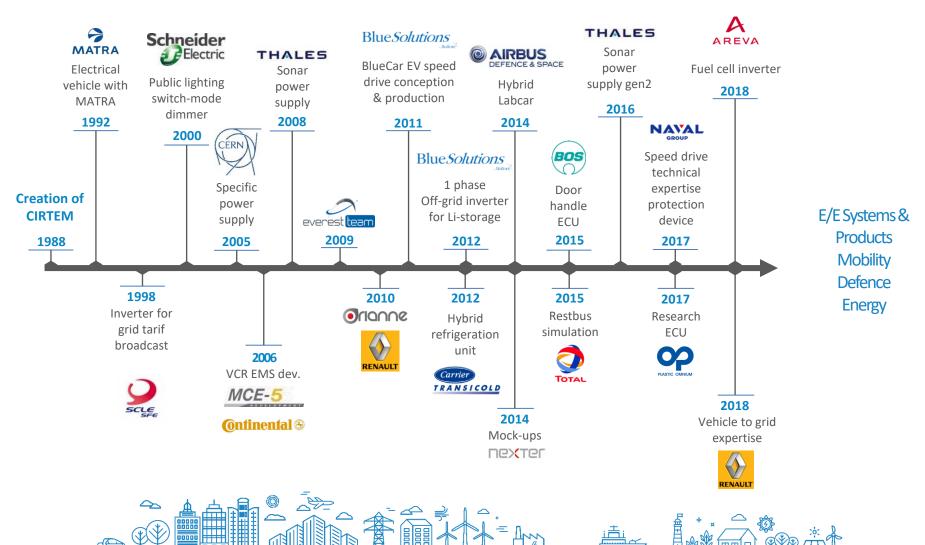

History

Company key events

Markets

Multi-sectorial approach

Mobility

Speed drives

DC/DC & Chargers

ICE & Hybrid Control

Supervision

Defence

Onboard network

Powertrain

Storages

Protections

Electric infrastructures

Smart Grids

Micro Grids

Railwa

Fast charging

Industry

Process Power Supply

Ozonation

HV power supply

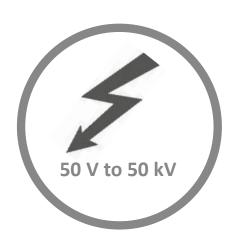

Induction

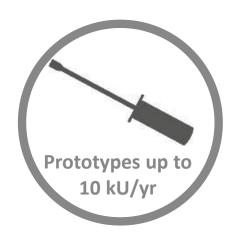

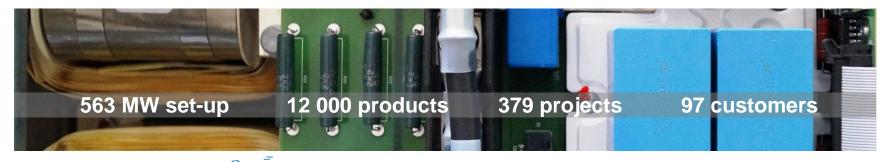

Power Converters and Electronic Equipments

Mission

Added value

System Engineering

Architecture optimization

Tailored help

Preliminary specification

Development

Simulation

Power design

Mecatronics

Software

Production

Small and mid series

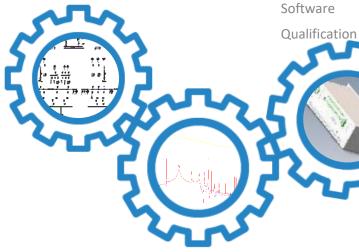

One-shot product

Prototypes

Build-to-print

Specialized subcontracting

Test bench development

Pre-study

Technical feasibility

Budgetary cost

Detailled specification

Industrialization

Optimized supplies

Semi-automated assembly

Automated testing

MCO

Obsolescence monitoring

Redesign

Components storage

Power electronics expertise

A 30-year know-how

Architecture

Reversible AC-DC et DC-DC LF, HF Isolation or transformerless Hybridation of storages

Control

Real time regulations Sensorless motor driving Hybridization Regenerative systems

Ranges

Low voltage from 50V to 1500V High voltage up to 50kV Power from 1kW to 10MW High speed up to 50 000 rpm

Core technologies

IGBT modules & MOS SiC & GaN Multilevel technologies Planar transformers Air or liquid cooling

Controls expertise

A 16-year know-how

System engineering

From definition tovalidation ICE Management Groupe motopropulseur électrique et hybride Validation & test HIL

Hardware engineering

Architecture à base numérique Conception du Hardware ECU Conception et réalisation de harnais

Test bench development

Motor test bench Vehicle environment simulator ECU programming

Real time software

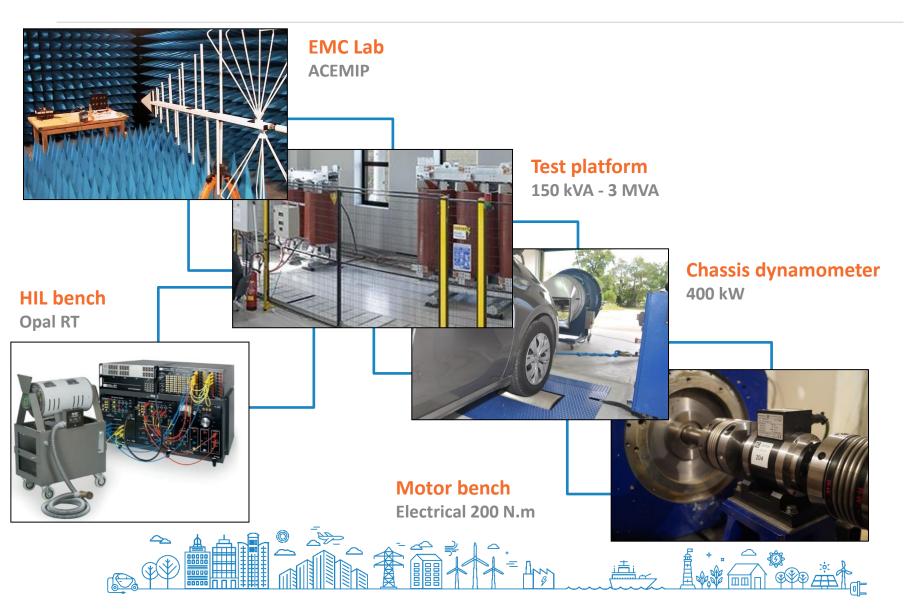

Software architecture Basic software Application software Communication layers

Test means

From simulation to physical test benches

Manufacturing means

Full control in power electronics

Semi-automatic ASSEMBLY

Full TRACEABILITY

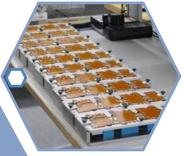

In-house designed products production
Flexibility: 1 to 10 000 units / year
Built-to-print Manufacturing
Maintenance in Operational Condition

(Up to 30 years)

Automatic TESTING

Customer portfolio

They trust our expertise
